Course: PYTHON

USN: HALITECO88

Topic: 1. FIXING PROGRAMMING  
ERRORS  
2. APPLICATION 3: BUILD A  
WEBSITE BLOCKER

Semester  
& section: W 'A'

github

Repository: Shradha courses

① fixing programming errors:

~~• synt.~~

There are three kinds of errors

• syntax errors,

• runtime errors

• logic errors

• These are ~~the~~ errors where the compiler finds something wrong with program, and you can't even try to execute it.

② Build a website blocker:

(i) website blocker - How the output look like

(ii) ~~setup~~ the script

(iii) Implementing the first part

(iv) developing a website to a live server

(v) Sticking python program as windows
